EXPERIENCE

Project #1 : Intuit, USA Intuit-FICDS-Web Integration – Branding

Associate – Lead

Technology: ASP.Net, C#, SQL, Jenkins, GitHub, Perforce, Angular, Node, Express Team Size: 1

About the Project:

- Individual contribution for last four years for this application
- The Branding server is for online banking services that supports few desktop products and web application.
- There are few web applications for the admin and the service providers of financial institutions to do the required setup for the products.
- The desktop products communicate to the branding servers for information on the how to contact the Financial Institutions online banking servers.
- Financial Institutions also conduct limited marketing campaigns using Branding.
- Migration to new Branding Application (Angular)

Project #2 : Annuity Payer (Patent Renewal Made Simple) USA

Product owner

Technology : Knockout, MVVM, Cassandra, MVC, ASP.Net 4.0, C#.Net, Web Service, WCF, AJAX and MS Sql Server 2008, Angular Team Size : 9

About the Project:

Patent Renewal Made Simple Everywhere

- Upload your patent portfolio, select assets to renew, and pay. It is that easy.
- Whether it is one patent or thousands of patents, our Importer allows you to quickly import your portfolio to view and act on upcoming annuity actions.

- Our eCommerce inspired interface makes it easy for you to select and pay renewal fees.

Get instant patent renewal cost projections, for Free

- Get renewal cost projections immediately with our Patent Annuity Estimator.
- Gain insights into your patent renewal cost by dynamically filtering by jurisdictions and time period in real time.
- Automatically generate and export invoices and cost projections.

See and control your annuity actions

- Make decisions quickly using our intuitive Annuity Dashboard.
- Keep track of upcoming, in-progress, and completed renewals.
- Receive automated reminders of upcoming annuity actions.
- Never be surprised by due dates, eliminate late penalties, and minimize legal costs

Flat Processing Fee* per renewal

- You pay only the official PTO fee and our flat fee per renewal.
- No extra annual management fees, subscription fees, sign-up fees, or reporting fees.

Estimate and Plan

- Import your portfolio and get renewal cost projections with our free Patent Annuity Estimator.
- Analyze your renewal cost by dynamically filtering by jurisdictions and time period.

Pay your Renewals

- Import your patent portfolio, select assets to renew, and pay.
- Our e-commerce inspired interface makes it easy for you to select and pay renewal fees.

Project #3 : TIM PRODUCT (WEALTH MANAGEMENT) GERMAN

Product owner

Technology: .Net 4.0 2012, MVC 4, WCF, AJAX and MS Sql Server 2012, Linq, Kendo Team Size: 3

About the Project:

The purpose of this project is to maintain the wealth details of multi-millionaires throughout the world excluding Europe. For every millionaire (say 'mandate'), a trust will be created and under the trust, many sub companies will be created where wealth details will be shared among the companies. For each company, many people will work to perform various functionalities.

Fund transfer can be done by this application. Previously this was achieved using 'SWIFT' which is a third party vendor. In this process, details will be sent to 'SWIFT' from where corresponding bank will be contacted for the details from 'Swift'. As a result, fund transfer will be achieved from the bank to 'Swift', which in turn will be transferred to the mandate. 'Swift' will deduct some commission amount for this fund transfer process. Here 'Swift' acts as an intermediary between mandate and the bank.

Currently we have enhanced the functionality by using 'SWIFT xml', without relying on 'Swift' corporation. Using Swift xml we can interact directly with the bank for fund transfer involving MT type's concept. This application supports 5 Languages and 5 types of currencies.

Project #4 : IntelliModule - USA (Faithium Groups).

Developer

Technology : ASP.Net 4.0, C#.Net, Web Service, WCF, AJAX and MS Sql Server 2008, Telerick, Angular JS Team Size : 3

About the Project:

The purpose of this project is to publish classifieds. This project contains 3 Business and Management module panels such as CP, UP, MP. A company can create employees who in turn maintain documents in this. **Master Panel: It gives access to all Companies that maintain Master Panel. [Master Admin].**

Control Panel: It gives company wise access that maintains Control Panel. [Control Panel].

User Panel: It is a multi-document application. An application from server can be accessed by multiple admin by means of IntelliModule. Basically process shark is a parent-child concept in which child can access the application from the parent. It is a Multi-level (ML).

This application is used by organizations such as group of universities, corporate companies, hospitals, etc., to access the application for document management system. Forum Concept and Space Allocation are its salient features: Editor has the function of automatically saving the documents from the server. It thus exhibits the feature of Auto Save for all functionalities, Language Translation, Security, and Dynamic Menu Control.

Responsibilities:

- Creating study documents, requirements and analysis.
- Design the flow of screens.
- Involved in UI Module, Business Module and Management Module.
- Written SQL procedures and functions and triggers and Linked Server.
- Coding and implementation

Project #5 : 2020lifestyleonline - UK

Developer

Technology: ASP.Net 4.0, C#. Net, J Query, MS Sql Server 2008 Team Size: 2

About the Project:

2020lifestyle is a customized E-commerce application that provides solutions to real world issues. It integrates all processes of managing restaurant promotions online. It is developed in Life health production. The users of the UI modules can like/dislike the promotion/dishes.

The users can register and then show their willingness to visit their Login with number of people. Otherwise they can offer coupons for their arrivals. In the Management module the administrator can manage dynamically both the UI and Business modules.

Responsibilities:

- Documented functional and business requirements
- Developed Business Module and Management Module.
- User interface design.
- Third party Tools (ASPSTOREFRONT)
- Business logic implementation
- Configuration Management.

Project #6 : Mobius Institute -UK

Developer

Technology : ASP.NET, C#.Net, SQL Server 2005, CMS Team Size : 4

About the Project:

This is an umbraco based CMS-driven social community website developed for Mobius Institute which is primarily into vibration analysis and shaft alignment training business.

The member of the site can find articles, tips, and presentations and can join as free member, form groups, communicate with Mobius and among themselves. E-Commerce Module was also integrated for the product (Course / Content / Premium membership is considered as product) purchase.

Project #7 : Ecay Trade –UK

Junior Developer

Technology : ASP.Net 4.0, C#.Net, Web Service, MVC 2.0, WCF, AJAX and MS Sql Server 2008
